

Business Mathematics and Applications

A Word Problem

Dunkin' Donuts sells to four different companies a total of \$3,500 worth of donuts per week. What is the total annual sales to these companies? What is the yearly sales per company? (Assume each company buys the same amount.) Check your answer to show how multiplication and division are related.

Handwritten work showing calculations:

$$4 \rightarrow \$3500/\text{WK} \quad \$3500$$
$$\begin{array}{r} 875 \\ 4 \overline{) 3500} \end{array}$$
$$875 \times 52 = 45,500$$
$$4 \rightarrow 182,000$$
$$4 \overline{) 182,000} = 45,500$$

PENNFOSTER

The use of business mathematics helps individuals to efficiently manage business operations and complete the payroll for companies and organizations. In this chapter, you'll see how business areas such as accounting, marketing, forecasting and financial analysis all use some form of business math applications. business applications includes the cost of recruiting, hiring, training, maintaining employees; manufacturing/production costs; purchasing/selling/marketing costs; transportation/warehousing/inventory costs; and financial management and planning. Various application of business mathematics in production 1.
